Informatics student exploring software engineering and web development. Learning full-stack web development through academic coursework and personal projects, with a strong motivation to grow and improve technical skills.

EDUCATION

Bachelor of Informatics (S.Kom.), President University 2023 – 2026

- GPA: 3.95.
- 75% Jababeka Scholarship for Undergraduate Students, President University.

WORKING EXPERIENCES

Internship, Data Engineer Intern, PT Federal International Finance (FIFGROUP) February 2026 – August 2026

- Built and maintained a CDC platform (Kafka KRaft, Debezium, Prometheus, Grafana) to evaluate log-based replication across 15+ Oracle source tables, adding custom Python exporters for Kafka offset lag, Spark lag, and connector health.
- Delivered Oracle to Oracle pipelines for 5 tables using Debezium on Kafka Connect, with no changes to the source application.
- Delivered Oracle to Iceberg pipelines for 10 tables holding 40M+ records using Debezium and cron-scheduled Spark batch jobs.
- Engineered a Spark bulk initial load for a 600M row (200 GB) Oracle table where the Debezium snapshot path was not practical, then cut it over to Debezium delta streaming at 3 to 6 minutes per batch.

Internship, Backend Engineer Intern, Bank Central Asia Tbk (BCA) August 2025 – February 2026

- Developed 2 modular services consisting of a FastAPI gateway and a Kafka consumer layer using Confluent Kafka, deployed with multi-stage Docker images, Jenkins, and RedHat.
- Implemented structured logging and built end-to-end transaction monitoring dashboards in Kibana on an existing ELK stack across 2 services.
- Conducted stress testing with JMeter handling around 10,000 requests with >99% successful end-to-end delivery.
- Migrated 15+ services from Flask to FastAPI, enhancing production performance and stability.
- Created Swagger-based API documentation, cutting deployment time by 10% by removing the need for manual tech documentation.
- Evaluated asyncpg vs. psycopg2 under 1,000 concurrent requests, with asyncpg achieving 100% successful connections compared to a ~50% failure rate with psycopg2.

Part-time, English Language Instructor, President University September 2024 – August 2025

- Taught English classes across 3 semesters, instructing and supporting a total of over 150 students.
- Responsible for delivering lessons, providing feedback, and tracking student progress throughout the course.

Self-employment, Freelance Game Performance Tester, Self-employed December 2024 – January 2025

- Performed performance testing on 2 games across 4 configurations, identifying bugs and performance issues.
- Reported stability and performance findings across test scenarios.

PROJECTS

WorkByte – Freelancer App [\[https://github.com/hwasyui/WorkByte-BACKEND\]](https://github.com/hwasyui/WorkByte-BACKEND) Capstone Project (2026)

- Architected and developed the complete backend system using FastAPI, PostgreSQL + pgvector, Docker Compose, and Flutter integration, implementing secure authentication, real-time messaging, contract, push notifications, moderation systems, and role-based admin management.

- Designed and deployed AI-powered features including semantic job matching, a RAG-based job fit analyzer using Groq API, shared vector search infrastructure with pgvector HNSW indexing, and a BERT-based harmful text classifier.

Book Chatbot with RAG and Gemini [<https://github.com/hwasyui/rag-chatbot>] *Personal Project (2025)*

- Built a full-stack RAG chatbot using FastAPI, Gemini 2.5 Pro, LangChain, and FAISS for book Q&A.
- Implemented a basic ETL-style data pipeline by scraping 4,000+ book descriptions with Selenium, transforming text via cleaning and embeddings, and loading data into MongoDB and FAISS; deployed with Docker on Railway.

Merchandise Center [https://github.com/hwasyui/RIYAN_shop] *Academic Project (2025)*

- Developed a React–Firebase web app with Flask APIs for summarization (BART) and sentiment analysis (DistilBERT), fine-tuned on 6,000+ reviews.
- Built during a 5th-semester AI Bootcamp in collaboration with Lapis AI, applying industry-oriented use cases.

Splitbill by Angelica's [<https://github.com/hwasyui/splitbill>] *Academic Project (2025)*

- Developed a bill-splitting web app using Next.js and Gemini AI to extract receipt data from images (IDR currency).
- Implemented editable extraction results, flexible and per-unit splitting, and shareable outputs via 24hour links or downloadable PDF, created as an alternative after LINE Split Bill was discontinued.

MoTrack! Expenses Tracker [<https://github.com/hwasyui/mo-track>] *Academic Project (2025)*

- Built a full-stack expense tracker using Next.js, Tailwind CSS, Drizzle ORM, and Clerk authentication to manage and track user expenses.

SKILLS AND TOOLS

- **Programming Languages:** Python, Java, JavaScript.
- **Web Development and Databases:** HTML, Tailwind CSS, Next.js, React.js, Express.js, FastAPI, MySQL, PostgreSQL, MongoDB, Firebase.
- **Artificial Intelligence:** Machine Learning and Deep Learning (TensorFlow, Keras, PyTorch, Transformers), Computer Vision (YOLOv11), Natural Language Processing (Summarization, Sentiment Analysis, Semantic Search, Chatbots, Speech-to-Text, LLM APIs).
- **Other Platforms and Tools:** Google Workspace, Microsoft 365, Docker, Git, Postman, Kafka, JMeter, ELK Stack (Kibana), Debezium, Prometheus, Grafana, Linux, Tableau, Jupyter Notebook, Google Colaboratory.

OTHERS

Languages: Indonesian Language (Native), English (Advanced)

Certificates: Duolingo English Test (130) by Duolingo English Test (2023), Data Classification and Summarization Using IBM Granite by IBM (2025), Generative AI for Information System by Thematic Academy Digitalent (2024), Korean-ASEAN Digital Academy Bootcamp by Elice Inc. (2025), AWS re/Start Program by AWS and Orbit Future Academy (2025).
